

WEEK 6: SIMULATE THE LIFECYCLE STAGES FOR UI DESIGN USING THE RAD MODEL AND DEVELOP A SMALL INTERACTIVE INTERFACE USING AXURE RP

V Roshini | 230701270 | CSE-FC

AIM: The aim is to demonstrate the lifecycle stages of UI design via the RAD model and develop a small interactive interface employing Axure RP.

1. Requirements Planning Phase

In this phase, we identify and define the goals, user needs, and system requirements for the UI.

- **Objective:**

Develop an interactive jewelry shopping interface with key features such as login, product browsing, and promotional offers.

- **Key Requirements:**
 - User login with email and password.
 - Password recovery option.
 - Display of promotional banners.
 - Search functionality (e.g., search for “rings”).
 - Product display categories (e.g., pendants, earrings, bracelets).
- **Stakeholders Involved:**
 - UI/UX designer.
 - Project manager.
 - End-users (for feedback).
 - Developer (working with Axure RP).

2. User Design Phase

This phase focuses on building quick prototypes and designing the user interface, collecting user feedback along the way.

- **Activities:**
 - Create wireframes and mockups for the login screen and product browsing screen using Axure RP.
 - Define the layout, including input fields, buttons, and navigation elements.
 - Integrate interactive elements (e.g., clickable login button, search bar functionality).
 - Incorporate user feedback to refine layouts and improve usability.
- **Prototypes Developed:**
 - Login screen (as shown in the left image):
Includes welcome text, email and password fields, “forgot password” link, and a login button.
 - Product browsing screen (as shown in the right image):
Includes a search bar, promotional banner, and clickable product categories like pendants, earrings, bracelets.
- **Tools:**
Axure RP for interactive prototypes, allowing clickable flows and dynamic elements.

3. Construction Phase

In this phase, the actual interface is developed rapidly, based on the approved design prototypes.

- **Tasks:**
 - Build the interactive login form, connecting input fields to basic validation.
 - Implement product categories with navigation links.
 - Set up the promotional section with dynamic image content.
 - Integrate search functionality mockups (not fully functional search

- engine, but interface-wise ready).
- Ensure visual consistency, color schemes, and branding.
- **Focus:**
Speed of development, iterative feedback, and continuous adjustments in Axure RP.

4. Cutover Phase

This is the final phase where the system is tested, finalized, and prepared for handover.

- **Activities:**
 - Conduct UI testing to ensure all buttons, links, and interactions work as intended.
 - Perform user walkthroughs to check flow and ease of navigation.
 - Final adjustments based on feedback.
 - Prepare documentation and finalize the prototype for client presentation or further development.
